

Add Content Style

1. To add content style to an area of your webpage, locate the area you want to edit and select the edit icon.

2. Place a check mark next to 'content style'. From the dropdown choose the style you would like.

3. Select your color scheme - the Primary, Secondary, and Optional Third will match the selections in your appearance tab under manage. Custom will give you the ability to choose from a color picker or place a hex number value.

4. You can add a title. Add an icon that will display just left of the title. And embed a URL link.

5. Once you have everything set the way you like it, click and preview on the upper right corner and you will see what it will look like once you save the changes. If everything is to your liking, click save. And your information is automatically updated.
